Montana Highway Planning Survey

Reference is made to your memorandum of April 20, relative to the Montana Federal-aid Road Log revised to December 31, 1944.

The note, "See note regarding municipal mileage" refers to the total in each affected "municipal" column where an asterisk is found referring to a foot note. This foot note is necessary as it explains why certain mileage is subtracted to obtain net total.

Tables 3, 3A, and 4 are intended to show the amount of unimproved mileage (as listed in the details of each route) which is now under, or not under, contract. "Unimproved" means mileage not yet improved by the State or Federal Government and not taken over by the State, and is used in nearly all the tables. It has nothing to do with surface type. This will be explained in next year's log in the preface.

As suggested, a definition of rural and municipal mileage will be included in the preface next year, which will read about as follows: "Municipal mileage, as used in all tables, is mileage lying within the city limits of incorporated cities, rural mileage being that lying outside of such limits". Possibly this definition would change if "urban areas" should be designated outside of any city limits. This definition would also, of course, apply to tables 7 and 8.

A tabulation of mileage inside of urban areas of 5,000 or more population will be prepared as soon as time permits and will be included in next year's log.

We would be glad to receive, anytime between now and next January, any additional suggestions that you may have which would improve the log. We have some improvements of our own which we intend to make but they will not be mentioned now.

THE MONTANA FEDERAL AID ROAD LOG

Transmitted herewith is a copy of the Montana Road Log, revised to January 1, 1945, which has been prepared by the Highway Planning Survey.

Included in the Road Log are descriptions and tabulations of all routes on the Federal-aid System, the Federal-aid Secondary System and the Forest Highway System and tabulations of other roads constructed by the State or Public Roads Administration.

A number of new and revised city plats are included at the back of the Log. It is intended to include city plats, when completed, for all incorporated cities in Montana.

Detailed information concerning the data in the Road Log may be obtained by reference to the Preface.

Very truly yours,

PREFACE TO ROAD LOG

The following tables show lengths of various projects comprising the Montana Federal Aid and Federal Aid Secondary Systems. Supplementing this information are tables showing all other roads constructed by the State or Public Roads Administration and a tabulation showing the lengths of all Forest Highway Routes.

These mileages have been computed to determine route, construction, maintenance and present traveled way lengths, all under the several administrative areas. All construction data are for projects completed prior to January 1, 1944.

The Log includes data regarding surface type, widths and surface and base thicknesses. Minor changes in these items within a project have not been shown, the predominant characteristics having been used.

All mileages shown, excepting that for route length are for completed projects. In the case of projects under contract but not completed, the route length, the surface types, widths, and thicknesses shown are those representing the work as it will be when completed.

Just preceding the tabulation of Route 1 are maps showing the Montana Federal Aid System and the Montana Federal Aid Secondary System.

Column 1 identifies counties, municipalities, Forest Highway routes, junctions and other pertinent points.

Column 2 is for project designation. Also shown is the authority under which the project was constructed.

Column 3 is used as a reference for explanatory notes:

- b - Project under construction
- d - Data from surveys, through Plans Department
- e - Estimated route length
- f - Data from Planning Survey Road Inventory

Y & T - Type of junction as shown in accompanying diagrams at the end of the preface. Other necessary explanatory remarks will be found at the end of each route.

Column 4 shows surface type, the letters designating the surface type being those used in the yearly S. M. Tables and are explained as follows:

A - Primitive Road

An unimproved route (on which there is no public maintenance) usable by 4-wheel vehicles and publicly traveled by small numbers of vehicles.

B - Unimproved Road

A road, composed wholly or with minor local exceptions of the natural ground of the region traversed, which may or may not have been bladed, which does not conform in respect to alignment, grade and drainage, at least to the definition of a "Graded and Drained Earth Road", and on which the only work that has been done by public authority is that required to maintain a condition of bare passibility for horse-drawn or motor vehicles.

C - Graded and Drained Earth Road

A road of natural earth, aligned and graded to permit reasonably convenient use by motor vehicles, and drained by longitudinal and traverse drainage systems, natural or artificial, sufficiently to prevent serious impairment of the road by surface water.

D - Soil-surfaced Road

A road of natural soil, possessing qualities of alignment, grade and drainage at least equal to those described under "Graded and Drained Earth Road", the surface of which has been treated for purposes of stabilization by the addition of a course of mixed soil, such as sand-clay or top soil, or an admixture such as bituminous material, Portland cement, calcium chloride, sodium chloride, or fine granular material (sand or similar material).

E - Gravel or Stone Road

A road, the wearing surface of which consists of gravel, broken stone, slag, chert, caliche, iron ore, shale, chert, disintegrated rock or granite, or other similar fragmental material (coarser than sand).

F - Bituminous Surface-Treated Road

A graded and drained earth road, a soil-surfaced road, or a gravel or stone road, to which has been added by any process a surface mat or bituminous material and mineral aggregate less than one inch in compacted thickness.

G - Mixed Bituminous Road

A road, the wearing surface of which is one inch or more in compacted thickness, composed of gravel, stone, sand, or similar material, mixed with bituminous material under partial control as to grading and proportions.

H - Bituminous Penetration Road

A gravel or stone road, consisting of a base course and a wearing course one inch or more in compacted thickness bound with bituminous material introduced by downward or upward penetration.

I - Bituminous Concrete or Sheet Asphalt Road

A road, the wearing surface of which consists of gravel, stone or sand, mixed with bituminous material in accordance with precise specifications defining gradation of the mineral aggregate and proportions of aggregate and bituminous cement one inch or more in compacted thickness, and laid on a base course of either rigid or non-rigid type.

J - Concrete Road

A road, the wearing surface of which consists of Portland cement concrete, with or without a bituminous mat less than one inch in compacted thickness.

K - Brick Road

A road, the wearing surface of which consists of vitrified paving brick with or without a bituminous mat less than one inch in compacted thickness.

L - Block Road

A road, the wearing surface of which consists of stone block, wood block, asphalt block, or other form of block except vitrified paving brick, with or without a bituminous mat less than one inch in compacted thickness.

M - Dual-Type Road

The term dual-type is applied to a surface of one type widened by a surface or surface of a different type sufficient in width to add at least one traffic lane to the road. For the purposes of this definition, eight feet is regarded as the minimum width for a traffic lane.

X - Bridge

This indicates that a bridge constitutes the entire project.

Column 5 shows compacted surface thickness carried to the closest one-half inch. For dual-types (M), the thickness of center portion of the road is used.

Column 6 shows base thickness, the thickness shown being a compacted weighted average over the entire section.

Columns 7 & 8 give the surface and roadway widths.

Column 9 shows route or centerline length of each project and is further explained with the Junction diagrams.

Column 10 shows actual construction or maintenance length along the route.

Column 11 shows the surveyed or estimated length of unimproved sections.

Column 12 is for recording lengths of additional wyves at junctions. Any mileage therein should be added to that in Column 10 to obtain the maintenance length.

Column 13 to 17, inc. show the administrative area under which each section lies.

Column 18 tabulates coincident mileage, that is, two routes traverse identical alignment. Coincident mileage is included in the route having the smaller number.

Column 19 shows the mileage along the traveled way as of January 1, 1943. Projects under contract but not completed do not affect this length. On Federal Aid Route 16, the P. T. W. used is via the extinct Wilder Crossing as this will be the county road replaced when the route is completed. The actual P. T. W. is via Lewistown, Winifred and Landusky.

Column 20 tabulates accumulated P. T. W. mileages.

Table 1, 1A & 1B summarize data regarding Forest Highway Routes.

Table 2 & 2A are breakdowns of the route length column (9).

Table 3 & 3A show the number of miles of unimproved mileage on each route as of January 1, 1943.

Table 4 lists all projects off the Federal Aid systems which were under contract as of January 1, 1943.

Table 5 is a log of the West Gallatin Highway or US 191, from Bozeman to a junction with Federal Aid route 13 north of West Yellowstone.

Table 6 is a tabulation of all roads built off the Federal Aid and Federal Aid secondary systems by the State, or Public Roads Administration.

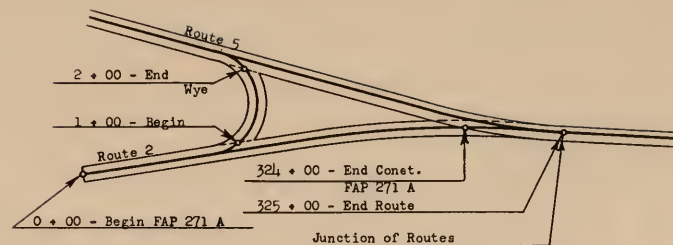

Table 7 & 8 are tabulations of all rural mileage in Montana by counties.

JUNCTION DIAGRAMS

Y and T, as noted in Remarks Column of the Road Log, have reference to the type of road junction.

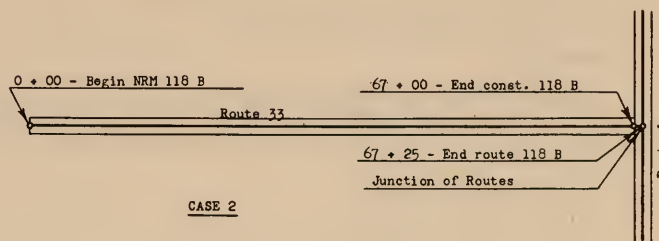

The accompanying diagrams explain our method used in calculating route and construction lengths of various projects.

In Case 1, that of a "Y" junction, the construction or maintenance length of FAP 271 A is from Station 0 + 00 to Station 324 + 00, plus the Wye from Station 1 + 00 to 2 + 00. The route length is from Station 0 + 00 to Station 325 + 00.

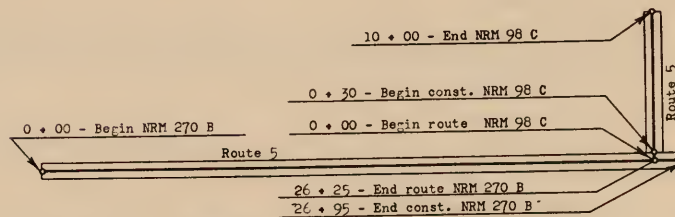

CASE 1

In Case 2, that of a "T" junction, the construction or maintenance length of NRM 118 B is from Station 0 + 00 to Station 67 + 00. The route length is from Station 0 + 00 to Station 67 + 25.

CASE 2

In Case 3, a "T" connection all on one route, the construction length of NRM 270 B is from Station 0 + 00 to Station 26 + 95, while the construction length of NRM 98 C is from Station 0 + 30 to Station 10 + 00. The route length of NRM 270 B is from Station 0 + 00 to Station 26 + 25, and the route length of NRM 98 C is from Station 0 + 00 to Station 10 + 00.

SUGGESTIONS FOR 1946 ROAD LOG CHANGE

1. Add population to all cities -- 1940 census.
2. City mileage table of 5,000 and over as requested by PRA.
3. Route + present PTW to be used if close. Otherwise use actual route and transfer county mileage.
4. Use computed constructed lengths.
5. Unimproved = route length less constructed.
6. Col. 13, 14, 15, 16, and 17 to equal col. 10, 11, 12.
7. Accum. in last col. -- Acc. to be accum. route.
8. Any project or length carried in unimproved column will have the same length in route column.
9. Surveys will not be entered, that is no change will be made until project is awarded.
